Advances in Tourism Research series publishes monographs and edited volumes that comprise state-of-the-art research findings, written and edited by leading researchers working in the wider field of tourism studies. The series has been designed to provide a cutting edge focus for researchers interested in tourism, particularly the management issues now facing decision-makers, policy analysts and the public sector. The audience is much wider than just academics and each book seeks to make a significant contribution to the literature in the field of study by not only reviewing the state of knowledge relating to each topic but also questioning some of the prevailing assumptions and research paradigms which currently exist in tourism research. The series also aims to provide a platform for further studies in each area by highlighting key research agendas which will stimulate further debate and interest in the expanding area of tourism research. The series is always willing to consider new ideas for innovative and scholarly books, inquiries should be made directly to the Series Editor.
