ABSTRACT

An automation system for CHAMIL GROCERIES at Opanayake is developed in order to computerize the operations of stock control system and other controls of the shop.

In the existing system all the operations of the shop are manual .The proposed system covers all stock control and some part of other sections.

The objectives of this automation are to enhance its business by using information technology. The new system will develop under the following areas of the system.

      1.Checking daily stock reports.
      2.Maintaining orders and issues from the suppliers.
      3.Payment for the suppliers and other payments.
      4.Billing for the customer.
